LED Smoky Magnetic Light Bulb Deco Line Globo G125 2,8W 90Lm E27 1800K - F05

Description

The F05 is a LED light bulb with a G125 globe shape, enclosed in smoky glass to set a warm and welcoming atmosphere. The unique feature of this product is the single, vertical filament that runs along the entire glass bulb. This filament creates distinctive light patterns and can be partially detached from the structure on one side, producing dreamy visual effects.

With a 2,8W consumption and a brightness of 90 Lumens, the F05 LED Globe G125 light bulb is the perfect choice to create a gorgeous atmosphere in any space. The standard E27 fitting makes the bulb compatible with a wide range of lamp holders. The warm light colour (1800K) ensures a refined yet welcoming atmosphere, and the smoky glass brings mystery and elegance to the room. When switched off, the glass appears as gray and elegant, and when the lights turn on the magic begins!

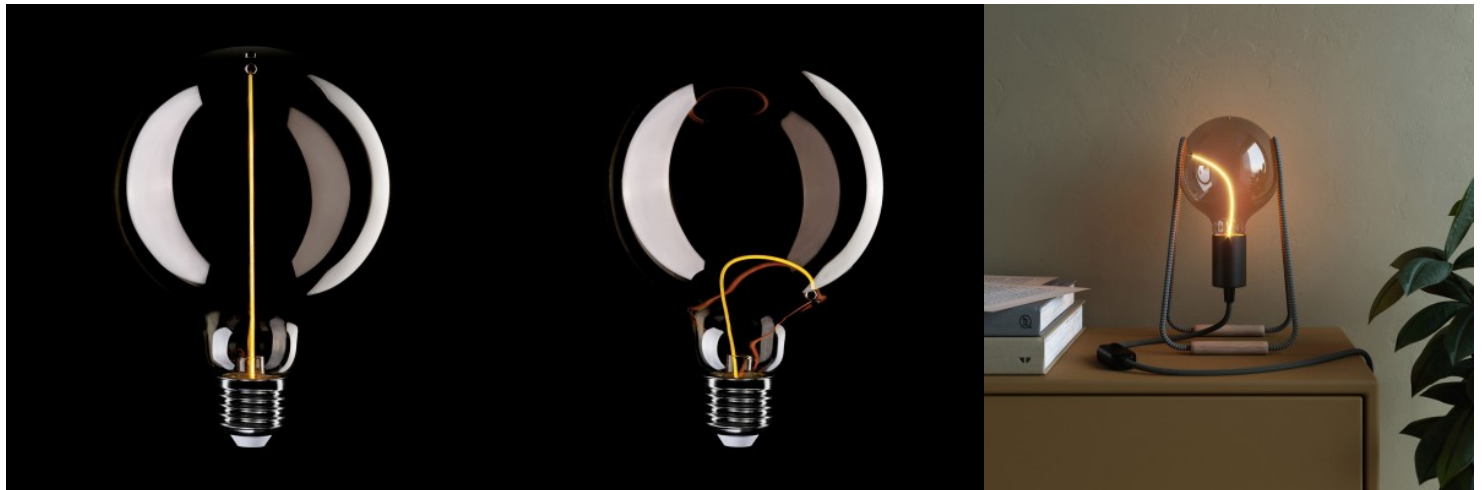

Give the light bulb a gentle shake to detach the filament connected to the base with a magnet. As it delicately rests on the glass, it will ignite a wonderful light show before returning to its original position. This little feature brings the light bulb to life, creating an immersive lighting experience every time you flick the switch.

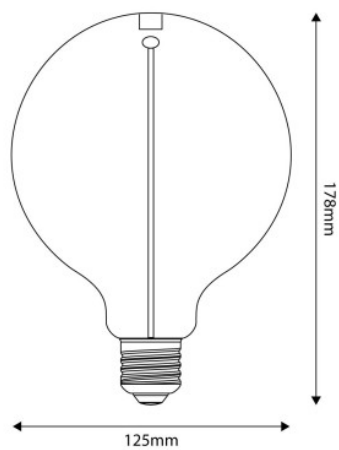

The F05: an art piece that goes beyond the purpose of a simple light source. Bringing together the elegance of the G125 globe shape and the extraordinary innovation of the magnetic filament. A perfect choice as a gift to yourself or others.
