Switch/Diverter kit with knob and base in black porcelain

Knob finish: Black

Description

This kit includes a base and a black porcelain switch/diverter, perfect for those who want to install an exposed electrical system with a retro charm. The base is also suitable for large section cables, allowing the connection of multiple components of the same line and/or different light points.

The switch/diverter, with a design inspired by old water knobs, allows you to control a light from various points, combining efficiency and decoration. Both components, available in a refined black finish, add a touch of elegance and uniqueness to any space, making this kit ideal for creating a vintage atmosphere in domestic and commercial environments such as shops, bars, and restaurants. The option to choose the knob in a matching or contrasting color also allows for maximum customization of the product.
